## Practice and Scenario Description:

Information Type	Data
Region	Appalachian
State	North Carolina
Discipline Group	Engineering General
Practice Code/Name	355 - Well Water Testing
Scenario ID	1
Scenario Name	Basic Water Test
Scenario Description	Typical scenario includes the professional testing for nitrates, nitrites, and coliform to confirm well water meets basic water quality standards for consumption by livestock or use in irrigation. Water samples are sent to an EPA or state certified laboratory for testing. This scenario is recommended when water quality is suspected to be acceptable.
Before Practice Situation	There are no known contaminants of the well, however, neighboring wells have known issues with nitrates, or coliform, and confirmation of acceptable water quality is desired. Manure is spread near to the well, following a nutrient management plan; well contamination is unlikely but possible.
After Practice Situation	Water quality results are known.
Scenario Feature Measure	No.
Scenario Unit	Each
Scenario Typical Size	1
